No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 8, 2

tumor necrosis factor alpha precursor - rabbit
NiAlternate names: cachectin; TNF alpha
CiSpecies: Oryctolagus cuniculus (domestic rabbit)
CiDate: 10-Sep-1999 #sequence revision 10-Sep-1999 #text_change 04-Feb-2000
CiAccession: A25454; A25451; JS0727

It can also act synergistically with interferon gamma to C;Comment: TNF-alpha and -beta (lymphotoxin) are the products of different genes closely user are produced by different cell types and have different induction kinetics.

"INFRSF11A/RANK. Osteoclast differentiation and activation factor. Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral

    similarity).
    TISSUE SPECIFICITY: Highly expressed in thymus and bone tissues.
    PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
    SIMILARITY: Belongs to the tumor necrosis factor family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hypercalcemia of malignancy.

I FUNCTION: Cytokine that binds to TNPRSFILB/OPG and to
TNPRSFILA. OSteoclast differentiation and activation factor.
Augments the ability of dendritic cells to stimulate naive T-cell
proliferation. May be an important regulator of interactions
between T cells and dendritic cells and may play a role in the
regulation of the T cell-dependent immune response. May also play
an important role in enhanced bone-resorption in humoral
hypercalcemia of malignancy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Name=1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  thymus."
```

```
-!- PTM: N-glycosylated.
-!- PTM: In-glycosylated.
-!- PTM: In-glycosylated.
-!- PTM: The soluble form of isoform 1 derives from the membrane form by proteolytic processing. The cleavage may be catalyzed by ADAMI7. A further shorter soluble form was observed.
-!- DISEASE: Deficiency in TRFSF11 results in failure to form lobulo-alveolar mammary structures during pregnancy. resulting in death of newborns. Trance-deficient mice show severe osteopetrosis, with on osteoclasts, marrow spaces, or tooth eruption, and exhibit profound growth retardation at several skeletal sites including the limbs, skull, and vertebrae and have marked chondrodysplasia, with think, irregular growth plates and a relative increase in hypertrophic chondrogytes.
-!- SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN THYMUS AND LYMPH NODES BUT NOT IN NONYMHENDID TISSUES AND IS ABUNDANTLY EXPRESSED IN T CELLS BUT NOT IN B CELLS. A HIGH LEVEL EXPRESSION IS ALSO SEEN IN THE TRABECULAR BONE AND LONG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PROSITE; SMOUACH: 1.
